

**Ex No: 2****BUILD A SIMPLE NEURAL NETWORKS****AIM:**

To build a simple neural network using Keras/TensorFlow.

**PROCEDURE:**

1. Download and load the dataset.
2. Perform analysis and preprocessing of the dataset.
3. Build a simple neural network model using Keras/TensorFlow.
4. Compile and fit the model.
5. Perform prediction with the test dataset.
6. Calculate performance metrics.

**PROGRAM:**

```
# first neural network with keras make predictions
from numpy import loadtxt
from tensorflow.keras.models import Sequential
from tensorflow.keras.layers import Dense

# load the dataset
dataset = loadtxt('pima-indians-diabetes.csv', delimiter=',')

# split into input (X) and output (y) variables
X = dataset[:,0:8]
y = dataset[:,8]

# define the keras model
model = Sequential()
model.add(Dense(12, input_shape=(8,), activation='relu'))
model.add(Dense(8, activation='relu'))
model.add(Dense(1, activation='sigmoid'))

# compile the keras model
model.compile(loss='binary_crossentropy', optimizer='adam', metrics=['accuracy'])

# fit the keras model on the dataset
model.fit(X, y, epochs=150, batch_size=10, verbose=0)

# make class predictions with the model
predictions = (model.predict(X) > 0.5).astype(int)
```

```
# summarize the first 5 cases
```

```
for i in range(5):
```

```
    print('%s => %d (expected %d)' % (X[i].tolist(), predictions[i], y[i]))
```

## OUTPUT:

```

Jupyter 210701103-DLC-Exp1 Last Checkpoint: 28 minutes ago

Accuracy: 78.65

```

## RESULT:

Thus a simple neural network using Keras/TensorFlow is built.
